

WALL TRANSFORMATION

SUPPLY LIST

- □ KILZ 2® All-Purpose Primer
- □ Paint
- □ Drop Cloth
- □ 1/4" Nap Paint Roller

- ☐ Paint Brush
- □ Can Kev
- □ Stir Stick
- □ Damp Cloth

- □ Tape
- □ Paint Tray

PRO TIP: Make sure your tape is nice and smooth with no wrinkles or creases in it otherwise paint could leak in.

PRO TIP: Apply primer using a brush first to "cut in" around edges, then use a roller to fill in. That's how the pro's do it.

- Wipe down the surface with a damp cloth to remove any dust. Primer and paint won't stick to dust. Allow the surface to dry.
- Tape around baseboards, trim, and moldings.
- Applying primer first is the best way to ensure a perfect finish later.

 Just as it does with makeup and on cars, primer creates a smooth base that promotes better adhesion and truer color from your topcoat paint.
- Allow 2 hours dry time.
- Apply paint as you did primer, using a brush first to cut in around edges 4 to 6 feet at a time, then use a roller to fill in those sections before moving along.
- Allow 2 hours dry time*, then apply second coat.
- Remove tape prior to paint drying and guess what? You're done. Look how awesome that looks! Camera phone. Insta. #nailedit
